Activated charcoal

Activated charcoal is a natural product obtained by calcination and treatment (injection of air and water vapor) of organic plant material. This activation treatment aims to develop the charcoal porosity and greatly multiplies its surface area, which gives it a strong absorption capacity. It therefore has the property of fixing unwanted toxic substances in the body, including the gas that is trapped in the bowel. Activated charcoal is a powerful cleaner that can absorb up to one hundred times its volume in gas. It remains in the intestine and is evacuated during bowel movement.

Consuming Léo Désilets maître herboriste Activated Charcoal helps relieve bloating and flatulence by eliminating gas due to fermentation in the intestine.

If this product is experiencing increased interest in recent years it is due to its natural origin and its effectiveness, however, it was already known before antiquity. They found traces of its use among the Egyptians and the Greeks, where it was employed as an antidote or treatment of drinking water.

More recently, the first scientific studies of the early 19th century demonstrated its strong absorption capacity and endorsed its use for the treatment of poisoning. Activated charcoal is still used in medicine for this purpose today. Indeed, it is considered one of the most effective absorbents on the market.

Actions Product

Antiflatulent. For the relief of pain due to gas.

Adults and children 12 years and older, take 2 to 3 capsules after meals or as directed by a physician. May be repeated every 2 hours as needed, up to 15 capsules per 24 hours.
